Sanitation Electric Three Wheeled Garbage Pickup Truck 30km/H 72V 1200W

Basic Information

- Place of Origin:
- Brand Name:
- SKCG3700-A Model Number:

China

Bochi

15-30 days

3000 sets/months

- Minimum Order Quantity: 3 sets
- Price: Further communication based on product
- Packaging Details:
- Delivery Time:
- Payment Terms: D/P, T/T
- Supply Ability:

Product Specification

- Rated Passenger Capacity: 1
- Overall Dimensions: 3700*1450*2100mm • Maximum Load: 1500kg 30km/h • Top Speed: Cruising Range: 60km • Motor Power: 72V1200W • Battery Capacity: 72V145AH Box Volume: 3.5 Cube
 - Highlight:
- Garbage Pickup Truck Three Wheeled, Garbage Pickup Truck Electric, 1200W garbage truck removal

New Energy Electric Three-Wheeled Rear Bucket Truck Garbage Cleaning And Sanitation Truck SKCG3700-A

Product performance and characteristics:

Side-hanging bucket truck, also known as self-loading garbage truck, is a special sanitation vehicle used with garbage compression transfer station, mainly suitable for the collection and transportation of garbage in garbage cans in urban streets, residential communities, parks and stations.

The overall structure design of the vehicle is reasonable and compact, the use of pure electric drive, automatic garbage loading and unloading, high efficiency. The box adopts lightweight design, large transport capacity and good sealing performance. The tipping mechanism is controlled by hydraulic components, docking with the standard garbage can, and a series of actions such as lifting, lifting, tipping, dumping, flipping, falling and returning are automatically completed, replacing manual work to realize the mechanization and efficient collection of garbage.

The cab is made of high-quality ST16 plate, molded by automobile process, beautiful in appearance, smooth in line, stronger, durable, safe and reliable than the traditional FRP process.

Pure electric variable drive mode, stepless speed change, low failure rate, easy to operate. It is driven by high-power torque motor, integrated differential gearbox transmission, and the whole rear axle has the advantages of large load, low noise, maintenance-free, etc. It adopts motor vehicle suspension before and after, and the rear plate spring is the main payment soft connection.

The whole vehicle hydraulic system is controlled by the drive power unit in the store, the design is reasonable, the system is stable, the operation is simple, the pump valve linkage work, energy saving, the box capacity is large, the seal is good, and the garbage transportation project does not produce secondary pollution. The 120 liter and 240 liter standard garbage cans can be quickly dumped.

Name/Model	SKCG3700-A
Length × width × height	3700*1450*2100(mm)
curb weight	1500(Kg)
Box volume	3.5m ³
rated load	1500(Kg)
endurance mileage	≥60(Km)
maximum speed	30(Km/h)
wheel base	2450(mm)
Maximum Angle of climb	15°
Rated occupant	1人
electrical machinery	High torque brushless motor 72V3000W
electronic control	intelligent controller 72V3KW
battery	6×72V145Ah
recharger	Intelligent high frequency, microcomputer control
charging time	Charge 6-8 hours
Lights and signals	LED running light, near and far light, turn signal, LCD instrument, electric horn, reversing voice, work warning light
hoisting	Pump valve connected, linkage work; 1000W
appliance	power
hang	Front suspension: steel hydraulic rod, coil spring shock absorber; Rear suspension: main pay steel plate; Non- independent suspension
rear axle	Integrated gearbox drive
tyre	Front: 450-12 Rear: 500-12
braking	Foot mechanical connecting rod drum brake; Manual mechanical parking; Rear wheel action
box	Material thickness 2.0mm; All joints are welded; Hydraulic brace open; The right hydraulic strut opens the upper cover; Side box plate can be opened 180°; The maximum lifting Angle of the box is 50°
